## Moon, Sun and Seasons Lab

Background: You have probably noticed that as the seasons change, the sun's height in the sky changes. During the long days of summer, the sun's altitude is high for most locations in the United States. As winter approaches, however, the days get shorter and the sun's maximum altitude becomes lower. What you may not have noticed, is the monthly and yearly variations that the moon experiences in its maximum altitude. This lab will show you that variation.

## Materials:

- graph paper
- five (5) different colored pencils or markers

## Procedure:

- obtain materials
- the data table gives the maximum altitudes of the moon and sun on selected dates for an observer at $40^{\circ} \mathrm{N}$ latitude for a certain year. Use a colored pencil to plot the sun's maximum altitude using an asterisk (*) for each of the dates given. Connect the asterisks to form a smooth curve.
- using different colored pencils, plot the maximum altitude of the moon for each of the dates in the data table. Use a hashtag (\#) for a new moon; a dot (.) for first quarter moon; a circle $(\mathrm{O})$ for the last quarter moon; and an " X " for a full moon. Once your points are plotted, connect all similar points in smooth curves. You will have a total of five (5) different curves.
- answer the analysis and conclusion questions

## Graph:

- for the graph, you are plotting altitude (in degrees) along the $y$-axis and the twelve (12) months of the year along the x -axis. Below is a sample of the graph layout. Remember the highest altitude is $\qquad$ .
- it is strongly suggested that you complete each curve separately as it will be easier to connect the similar symbols.

Note \#1: you must leave five (5) date boxes for the month of June.
Note \#2: be aware that this graph is not completely labeled - you are expected to label the graph completely (i.e. axis labels; graph title; etc.)

Data Table:

| Date | Moon Phase | Moon Altitude | Sun Altitude |
| :---: | :---: | :---: | :---: |
| January 4 | New Moon | $25.9{ }^{\circ}$ |  |
| January 13 | First Quarter | $62.9{ }^{\circ}$ |  |
| January 19 | Full Moon | $72.0^{\circ}$ | $29.5{ }^{\circ}$ |
| January 26 | Last Quarter | $34.8{ }^{\circ}$ |  |
| February 3 | New Moon | $33.1^{\circ}$ |  |
| February 11 | First Quarter | $69.9{ }^{\circ}$ |  |
| February 18 | Full Moon | $60.2^{\circ}$ | $38.0^{\circ}$ |
| February 25 | Last Quarter | $26.5^{\circ}$ |  |
| March 4 | New Moon | $45.3^{\circ}$ |  |
| March 12 | First Quarter | $74.5{ }^{\circ}$ |  |
| March 18 | Full Moon | $50.7^{\circ}$ | $48.8{ }^{\circ}$ |
| March 26 | Last Quarter | $26.6^{\circ}$ |  |
| April 3 | New Moon | $58.9^{\circ}$ |  |
| April 10 | First Quarter | $71.6{ }^{\circ}$ |  |
| April 17 | Full Moon | $36.1^{\circ}$ | $60.5^{\circ}$ |
| April 24 | Last Quarter | $30.6{ }^{\circ}$ |  |
| May 2 | New Moon | $66.5^{\circ}$ |  |
| May 9 | First Quarter | $64.6{ }^{\circ}$ |  |
| May 16 | Full Moon | $29.6{ }^{\circ}$ | $69.1^{\circ}$ |
| May 24 | Last Quarter | $41.1^{\circ}$ |  |
| June 1 | New Moon | $73.7^{\circ}$ |  |
| June 7 | First Quarter | $55.2^{\circ}$ |  |
| June 15 | Full Moon | $26.0^{\circ}$ | $73.3{ }^{\circ}$ |
| June 23 | Last Quarter | $54.0{ }^{\circ}$ |  |
| June 30 | New Moon | $73.4{ }^{\circ}$ |  |
| July 7 | First Quarter | $39.9{ }^{\circ}$ |  |
| July 14 | Full Moon | $28.3^{\circ}$ | $71.7^{\circ}$ |
| July 22 | Last Quarter | $61.9^{\circ}$ |  |
| July 29 | New Moon | $69.1^{\circ}$ |  |
| August 5 | First Quarter | $32.2{ }^{\circ}$ |  |
| August 13 | Full Moon | $37.4{ }^{\circ}$ | $64.7^{\circ}$ |
| August 21 | Last Quarter | $71.4{ }^{\circ}$ |  |
| August 28 | New Moon | $56.0^{\circ}$ |  |
| September 3 | First Quarter | $27.6^{\circ}$ |  |
| September 12 | Full Moon | $50.0^{\circ}$ | $54.2^{\circ}$ |
| September 19 | Last Quarter | $73.6^{\circ}$ |  |
| September 26 | New Moon | $46.6^{\circ}$ |  |
| October 3 | First Quarter | $27.4^{\circ}$ |  |
| October 11 | Full Moon | $58.2^{\circ}$ | $43.0^{\circ}$ |
| October 19 | Last Quarter | $68.8{ }^{\circ}$ |  |

| October 25 | New Moon | $37.9^{\circ}$ |  |
| :--- | :--- | :--- | :---: |
| November 2 | First Quarter | $34.6^{\circ}$ |  |
| November 10 | Full Moon | $68.9^{\circ}$ | $32.8^{\circ}$ |
| November 17 | Last Quarter | $61.1^{\circ}$ |  |
| November 24 | New Moon | $28.4^{\circ}$ |  |
| December 2 | First Quarter | $45.9^{\circ}$ |  |
| December 9 | Full Moon | $72.6^{\circ}$ | $27.2^{\circ}$ |
| December 16 | Last Quarter | $51.6^{\circ}$ |  |
| December 22 | New Moon | $27.3^{\circ}$ |  |

## Analysis \& Conclusion:

1. On your graph, compare the new moon's maximum altitudes throughout the year to the curve connecting the Sun's maximum altitudes. Why do the new moon's altitudes parallel the path of the Sun?
2. During which months is the Sun highest and lowest in the sky? During which months is the full moon highest and lowest in the sky?
3. What is the relationship between the Sun's noon altitude and the maximum altitude of the full moon?
4. What effect does Earth's tilt have on the altitudes of the Sun and full moon? How is this shown on your graph?
